

## Gran-I-Grit® Products

### The Pioneer of Large Grit Feeding

#### **GRAN-I-GRIT® makes money for you!**

When fed in the proper sizes, GRAN-I-GRIT® usually pays for itself many times over by giving more broiler and turkey meat per pound of feed even on all mash rations. Layers fed GRAN-I-GRIT® produce up to 20% more eggs with the same amount of feed.

#### **How does GRAN-I-GRIT® make this possible?**

Birds rush feed through their digestive tracts, keeping it only from 1/2 to 12 minutes in the gizzard. The proper sizes of GRAN-I-GRIT® in the gizzard grinds feed particles so small that the bird's digestive juices can quickly act on every bit of the valuable proteins, carbohydrates, fats, minerals and vitamins locked within the feed particles, converting them into a form for absorption into the blood stream where they aid growth and egg production. So you can see – without grit much of the valuable feed passes right through the bird *unused*.

## **Rough - Tough - Insoluble**

The rough and tough surfaces of GRAN-I-GRIT® enable the gizzard to cut up shavings, feathers and other fibrous materials that can clog up the digestive tract.

## **Attractive**

The whiteness of GRAN-I-GRIT® with contrasting black sparkling mica attracts birds to eat all they require.

## **Preventive**

Continuous feeding of GRAN-I-GRIT® also helps prevent digestive disturbances, diarrhea, cannibalism, cropbound conditions, and certain forms of paralysis. After passing through the digestive tract, GRAN-I-GRIT® exercises and strengthens the organs, removing mucus and lessening the chance of disease germs being established.

**Broilers:** Feed Starter size for two weeks. Feed Grower size for next four weeks. Feed developer-Layer size after six weeks.

**Layers:** Feed Starter size for three weeks. Feed grower size for next four weeks. Feed Developer-Layer size after seven weeks.

**Turkeys:** Feed Grower for size for three weeks. Feed Developer-Layer size for next five weeks. Feed Turkey size for next six weeks. Feed Turkey finisher size after fourteenth week.

The Sturdy Bird

## **Amount to Feed**

Usually a bird will eat no more grit than it needs, which for a layer is 1/6 to 1/3 lbs per month and for an adult turkey 1/3 to 2/3 lbs per month. If an occasional flock eats too much grit, change to the next larger size.

Birds pass out grit that is too small. The best rule is to feed the largest size the birds will eat in normal quantities.

**Caution:** Baby chicks and poults can mistake grit for feed with damaging results. Help them establish correct feeding habits by sprinkling grit over their mash or grain for the first two days. Then feed GRAN-I-GRIT® in separate hoppers.

## GRAN-I-GRIT® Products

**Starter**  
1/16" - 3/32"

**Grower**  
3/32" - 3/16"

**Developer - Layer**  
3/16" - 5/16"

**Turkey**  
5/16" - 7/16"

**Turkey Finisher**  
7/16" - 5/8"

**\*\* All of our GRAN-I-GRIT® products come ready for pick-up in 50 lb. poly bags with a 40 bag pallet minimum.**
